OUR MISSION

The Timeleap Industries mission is to create the very first truly DeFi-powered game ecosystem - one that excites both DeFi and gaming communities. To do this, we're building an exciting metaverse that:

- allows for social and competitive gaming,
- empowers gamers with assets that have real value, and
- provides a rewarding, yet sustainable, play-to-earn experience.

CORE CONCEPTS

1 - DeFi-first features for a robust in-game economy

The Timeleap Industries gaming economy is one that thrives on robust DeFi features. With **every in-game NFT item collateralized** by ERC-20 tokens from an extensive staking network and our own Decentralized Exchange at the core, **prices of in-game items are real and based on community-driven demand** (not controlled by game developers).

The infrastructure for Timeleap Industries will first be deployed on the **Polygon** chain, but it **can be deployed on any EVM-compatible blockchain**.

2 - NFTs with real value

In-game NFT items store respective native ERC-20 tokens when crafted, thereby translating to actual value for NFTs. **NFT prices are therefore not just based on sentiment**, which makes it easier for players to sell and trade NFTs.

3 - Asset management via NFT characters

Each player's base **character (i.e. account) is an NFT (ERC-998) that owns the player's in-game collateralized assets.** Asset transfer or sales is therefore possible by transferring accounts or assets owned by accounts.

4 - Sandbox gaming universe

Players have great flexibility to:

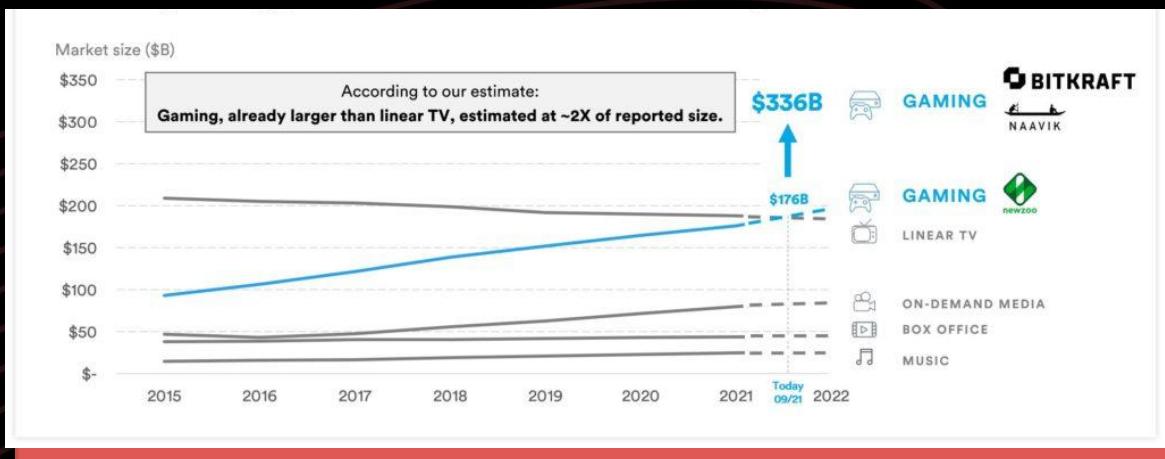

- Learn, level up Talents and participate in crafting guilds to **earn fees whenever NFTs are crafted**
- Build **combat specializations** based on the weapon, armor, and accessory NFTs equipped
- Battle through a **variety of game modes:** PVE, PVP, Dungeon Raids, Faction Wars, and Multiplayer Online Battle Arena (MOBA)
- Own in-game land NFTs that function as yield optimizers, obtain land enhancement NFTs that improve yields and **build land net worth**
- Get land valued, **trade it, stake it, or take up mortgage loans** to unlock funds for other investments
- Explore procedurally generated environments, unravel mysteries, and discover hidden plots in an **immersive, built-from-scratch narrative**

MARKET & LANDSCAPE

Gaming is bigger than all other media categories combined

With a projected revenue of \$336B, gaming stands as the largest media category by revenue in 2021.

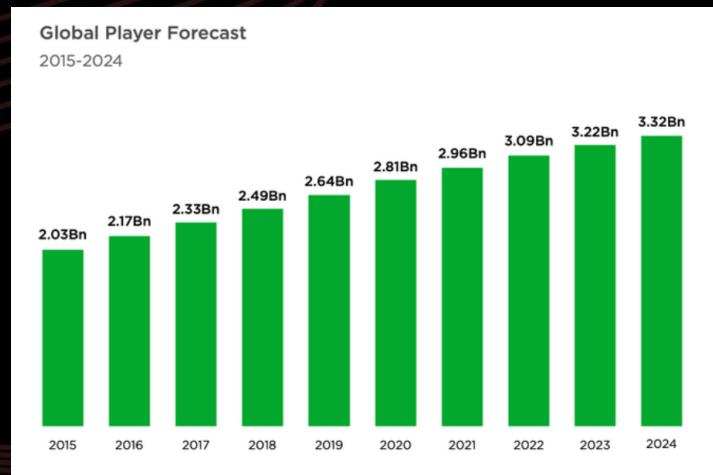

Bitkraft Gaming Industry Report

The global number of gamers will pass the 3-billion milestone next year in 2022

This number will continue to grow at a +5.6% CAGR (2015-2024) to 3.3 billion by 2024.

(Right) newzoo 2021 Global Games Market Report, CAGR: Compound annual growth rate

Blockchain gaming and NFTs have exploded in popularity, and they are only in their infancy

Popular platforms such as Axie Infinity (NFT-based online game using Ethereum-based cryptocurrencies) and OpenSea (world's first & largest NFT marketplace) have both generated top revenues, leading the charts in terms of protocol revenue.

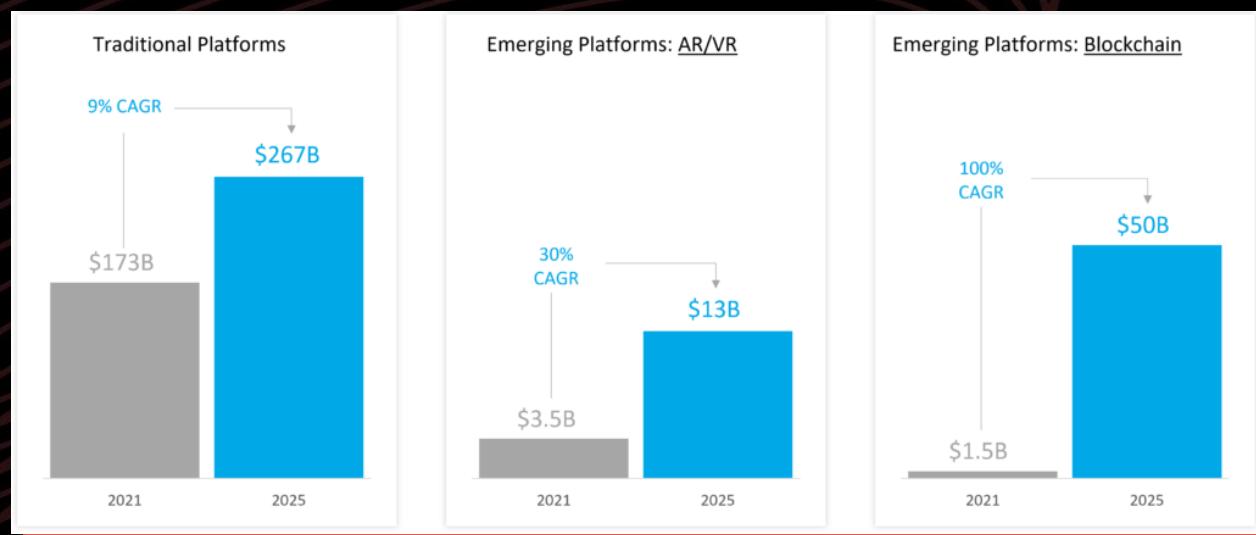

Protocol revenue generated from mid May - mid Nov 2021, via tokenterminal_

Blockchain game revenues are expected to grow at the highest CAGR

All of blockchain gaming, with a market size of \$1.5B billion, is only approximately 10% of the size of Gray Market Game Sales (\$11.5 billion) - and it is growing rapidly.

True ownership of in-game assets via NFTs will eat into this large grey market, and we are going one step further by creating NFTs with tangible value.

Every single NFT item is collateralized by tokens from an extensive staking network, and tokens can be “cashed out” by players. This is the first of its kind innovation in blockchain gaming.

Bitkraft Gaming Industry Report
CAGR: Compound annual growth rate

GAMEPLAY

1 - Rogue-like survival in a dystopian metaverse

Players may explore procedurally generated environments and unlock more game features - while having the flexibility to **go solo or survive with friends in a co-op instance**.

Players will need to **manage their Health, Hunger, and Stamina to survive the journey** before arriving at the next Safe Zone. Replenishments can be obtained by crafting in-game NFT items or purchasing them from other players.

2 - Fast-paced, action-RPG style combat

A **variety of game modes** (such as PVE, PVP, Dungeon Raids, Faction Wars, Multiplayer Online Battle Arena) add on to the game's robust dynamics.

All characters are also **classless**, giving players the **flexibility to build their combat specialization based on what they equip**. Weapon, armor, and accessory NFTs can be crafted or purchased from other players.

3 - Become a master crafter and earn from the economy

Players may learn, level up Talents, and **participate in crafting guilds to earn fees** whenever NFTs are crafted.

In this player-driven economy, the cumulative **levels of participating craftsmen in a guild determine when higher grade items are unlocked** for crafting.

4 - Own and earn from land

Players may own in-game land NFTs that serve as yield optimizers. Obtaining land enhancement NFTs help improve yields and **build up land net worth**.

Land can then be valued, **traded, staked , or used to take up a mortgage loan** that unlocks funds for other investments. Under the last scenario, land will be held in escrow and farming can still continue. In other words, **yields automatically pay for a player's loan**.

5 - An immersive, built-from-scratch narrative

Players will get to enjoy a narrative that includes humor, satire, and a dash of pop culture. Progressively revealed across multiple story acts, the narrative is crafted such that players can **unravel mysteries, discover hidden plots, and learn about the origins of Timeleap Industries**.

Visual novel lovers and NFT collectors may **build their visual novel NFT collection** by exploring story mode.

IN-GAME ECONOMY

The Timeleap Industries **game economy is real**. The game will operate with its own economic system and laws that are influenced by players themselves.

Unlike most blockchain games where there is only a single in-game currency, every single in-game NFT item in Timeleap Industries is collateralized by ERC-20 tokens which are listed on our DEX.

We aim to become the very first in-game economy that is truly DeFi-powered, and we will accomplish this with two key pillars - the **VITAL Index and Industries Decentralized Exchange (DEX)**.

VITAL Index

The Timeleap Industries in-game economy is supported by an extensive staking network, also known as the VITAL Index. Here are its key features:

1 - *NFT crafting and stored value*

Players can earn native tokens across the VITAL Index, and use them to craft in-game NFTs.

When natives are exchanged to craft an NFT, the NFT stores the ERC-20 tokens. The NFT's tangible value is thus determined by its amount of stored tokens and the price of the token.

This tangible value means that the NFT is not just sentiment-driven, making it easier for players to price, sell and trade their NFTs in our in-game marketplace, or even on OpenSea.

2 - *NFT consumption and burning*

NFTs can be used in the game - either consumed (e.g. food rations which help to replenish Hunger) or equipped (e.g. armor and weapons). Timeleap Industries is, after all, a survival game.

When an NFT item is used or runs out of durability, the NFT, together with its stored native tokens, are burned.

The burning of native tokens helps with price stabilization while curbing hyperinflation.

There will be other types of NFTs that come with varying deflationary mechanisms and will be introduced at a later stage.

3 - *Stable liquidity and prices*

Gaming tokens typically see a lot of price volatility due to a lack of liquidity providers. The VITAL Index's protocol-owned liquidity is meant to solve this.

The VITAL Index sells bonds at a rate determined by the protocol. This allows the protocol to secure stable liquidity without "renting" (paying out reward tokens to incentivize staking of LP tokens), increasing trade depth and reducing price volatility.

Industries Decentralized Exchange (DEX)

Our current fundraising rounds are for the DEX native token, INTEGRITY (\$INT). These are its key features:

1 - The centerpiece of the in-game economy

INTEGRITY (\$INT) is the very first DEX native token that will be used as the main in-game currency.

Players will use the Industries DEX to swap native tokens across the VITAL Index, as well as stablecoins and large caps. Swapping earns the user cashback in the form of \$INT.

Closely linked to the game narrative, players can spend \$INT to access game arenas, bypass game obstacles, purchase items, and gain exclusive access to bond discounts from the VITAL Index.

2 - Hyperdeflationary with a stable price

\$INT is created to be the very first DEX native token that is hyperdeflationary.

Almost every DEX native thus far has suffered from hyperinflation and price dumps. This is due to DEX natives being used as community reward tokens (and therefore sold).

We solve this issue by not emitting \$INT as a reward token. **\$INT cannot be farmed**; the only ways to get \$INT are to:

- Buy it from the circulating supply
- Get it via cashback from swapping at Industries DEX
- Participate in launchpads / accelerators / pre-sales

3 - A liquidity providing ecosystem

\$INT is supported by the VITAL Index staking network which helps incentivize liquidity.

INT LPs will be bonded throughout the network and stakers will be able to earn material tokens from the indexes they stake in. Stakers are incentivized to provide liquidity for INT LPs due to the factors mentioned in the VITAL Index section above:

- Material tokens can be used to craft in-game NFTs with actual value and therefore sold / traded more easily
- When consumed in-game, NFT items are burned, together with their stored tokens, creating price stabilization for NFTs and its tokens
- The VITAL Index system acts as a liquidity sink that buys LP tokens through bonding, thereby stabilizing token prices across the economy

The VITAL Index will also feature liquidity bonds for the Industries DEX, hence enabling swaps on the DEX.

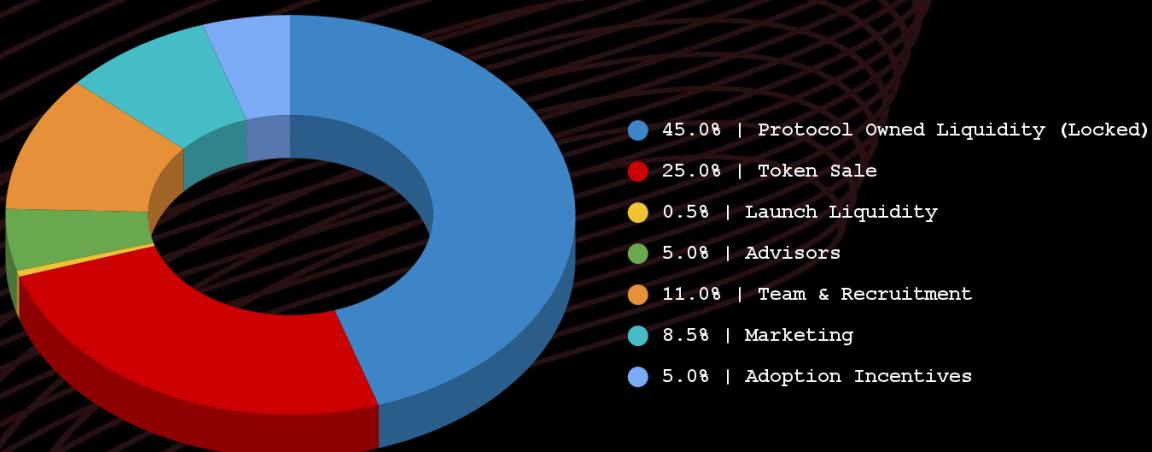

DEX COMPETITIVE ANALYSIS

	Industries	QuickSwap	Firebird
Total Swap Fee	0.3%	0.3%	0.2%
Swap Fee allocation:			
Liquidity Provider Fee	0.05%+ A large part of liquidity providing is incentivized through the Vital Index instead	0.3%	0.06%
Operating Costs	0.05%	0%	0%
Cashback to User	0.10%	0%	0.06%
Treasury / Others	0.10% Converted to form INT LPs with minted INT in Treasury. LPs locked in Treasury for at least 1 year. This provides a stable price for INT and is meant for future in-game utility in the form of collateralization.	0%	Converted to USDC as dividends for mHOPE stakers

INDUSTRIES DEX TOKENOMICS

- Token Name & Ticker: Integrity, \$INT
- Type: ERC-20 (As mentioned, the infrastructure will first be deployed on Polygon, but it can be deployed on any EVM-compatible blockchain later on)
- Max supply: 60,000,000 INT
- Launch price: \$0.40

Token distribution chart

Raise

Round	Token Price	% of Token Distribution	Tokens for Sale	Hard Cap	Vesting Period
Pre-Seed	\$0.096	1.0%	600,000	\$57,600	3% at TGE, then linear unlock per block over 18 months
Seed	\$0.160	7.0%	4,200,000	\$672,000	3% at TGE, then linear unlock per block over 16 months
Private	\$0.300	12.0%	7,200,000	\$2,160,000	5% at TGE, then linear unlock per block over 12 months
Strategic / KOL	\$0.300	2.0%	1,200,000	\$360,000	5% at TGE, then linear unlock per block over 9 months
Public	\$0.400	3.0%	1,800,000	\$720,000	15% at TGE, then linear unlock per block over 6 months
Total		25.0%	15,000,000	\$3,969,600	

Note: Token distribution and raise amounts are subject to change.

Token allocation & vesting

Token Allocation	% of allocation	Number of Tokens	Vesting Period
Protocol Owned Liquidity (Locked)	45.0%	27,000,000	24-month lockup. 100% locked in Treasury for liquidity pairing.
Advisors	5.0%	3,000,000	1-month lockup, then linear unlock per block over 12 months
Team & Recruitment	11.0%	6,600,000	12-month lockup, then linear unlock per block over 12 months
Marketing & Partnerships	8.5%	5,100,000	3-month lockup, then 10% after lockup, then linear unlock per block over 9 months
Adoption Incentives	5.0%	3,000,000	1-month lockup, then 10% after lockup, then linear unlock per block over 11 months
Launch Liquidity	0.5%	300,000	100% at TGE, 3 month lockup before migration to own AMM
Pre-Seed Round	1.0%	600,000	3% at TGE, then linear unlock per block over 18 months
Seed Round	7.0%	4,200,000	3% at TGE, then linear unlock per block over 16 months
Private Round	12.0%	7,200,000	5% at TGE, then linear unlock per block over 12 months
Strategic / KOL Round	2.0%	1,200,000	5% at TGE, then linear unlock per block over 9 months
Public Round	3.0%	1,800,000	15% at TGE, then linear unlock per block over 6 months
Total	100.0%	60,000,000	

THE BUSINESS

Our goal is to build a robust DeFi-first gaming ecosystem - one that merges playing with earning and excites both DeFi and gaming communities.

Here, you'll find more information on our revenue streams, marketing plan and roadmap to achieve our goal.

Revenue streams

As project continuity is development heavy, our set-up involves multiple revenue streams to support the project and help it realize its full potential. The game itself adopts a **freemium model**, and these are its revenue streams:

- **Fees** applied to in-game transactions
- **Bonding fees** earned from staking in the VITAL Index network
- A small fee applicable for **NFT crafting**
- Character creation (**2nd character and beyond**)
- **Player-to-player NFT sales**, where trading fees are earned
- **In-game advertising**, where spaces are rented as 'product placements' to other projects / companies

- **NFT sales** for limited edition in-game accessories

Marketing plan

Not only will **multiple launchpad / accelerator partnerships bring about exposure to an influx of new investors**, a significant portion of funds from fundraising rounds will be allocated towards marketing expenditure.

Marketing outreach

- Engagement of **influencers in the DeFi and gaming space**, across networks such as YouTube, and Twitter
- Paid **game reviews and game tutorials**
- Banner **advertising on DeFi and gaming specialized sites** which allow for targeted campaigns
- **Press releases and articles** on major news sites
- **Multiplayer gaming competitions** and eSports sponsorships

A portion of fees earned from the VITAL Index will also be channeled towards advertising on popular DeFi platforms. **This builds a steady base of DeFi users (on top of Timeleap's existing community) even before the game launches.**

Timeleap's community

Since July 2021, Timeleap Finance (with \$TIME as its native token) has **already built up a steady community of DeFi investors**.

The \$TIME community will be incentivized to participate in Timeleap Industries with a special combat utility within the game that will help them gain an edge in combat and exploration. \$TIME will also allow users to participate in land ownership.

We believe that these incentives will **keep our existing DeFi investors engaged and ready to participate once the Timeleap Industries game is ready for launch.**

Roadmap (2021-2022)

Nov '21 - Mar '22

- Market research, planning & conceptualization
- Corporate infrastructure set-up
- Incubation partnerships
- Marketing website & whitepaper
- Lore & narrative development
- Gameplay mechanics planning
- Art production tests
- Studio partnerships
- Early fundraising

Q2 2022

- Prototype (Recon Missions)
- Game trailer
- NFT crafting recipes
- NFT designs (Characters, Equipment, Consumables)
- VITAL index (In-game economy infrastructure)
- Ongoing lore & narrative development
- Partnerships

Q3 2022

- Vertical Slice (Recon Missions)
- NFT minting development (Characters, Equipment, Consumables)
- Industries DEX
- IDO marketing
- Ongoing lore & narrative development
- Partnerships

Q4 2022

- Game Alpha (Recon Missions)
- Exclusive character & equipment NFT sales
- Ongoing lore & narrative development
- Partnerships

2023+

- PVE (World Expansion)
- Factions & faction wars
- Land NFTs
- Unsecured lending & credit
- Ongoing lore & narrative development
- Game identity interactions development (NFT land, businesses, labor)

INVEST IN \$INT

First and foremost, we are building an entertaining and fun DeFi-powered gaming platform.

Rogue-like survival in a dystopian metaverse, fast-paced action-RPG style combat, sustainable play-to-earn opportunities, and custom designs across all character and in-game NFTs - these work together to build value for a RPG game-verse which is truly enjoyable.

On top of that, we have an **in-game economy that truly stands out from typical blockchain games** - one where every single in-game NFT item contains tangible value and is collateralized by ERC-20 tokens that are tradable.

A **real game economy** which operates with its own system and that is influenced by players themselves.

When you invest in \$INT,

- You are not just investing in any DEX native token. \$INT has **solid utility as an in-game currency and functions as the centerpiece of the Timeleap Industries in-game economy** - to access game arenas, bypass game obstacles, unlock premium crafting talents, and own land.
- You are buying into the **very first gaming and DEX native that isn't a reward token, making it truly hyperdeflationary**.
- You are investing into a native token **built to withstand price volatility**. Liquidity for \$INT is incentivized across an extensive staking network and >45% of its total supply will be locked away into protocol-owned liquidity (LP tokens) gradually with every swap.

DISCLAIMER

This whitepaper has been issued by Turnkey Capital LLC on 6 April 2022. It describes Timeleap's plans and may not be complete or final.

The purpose of this whitepaper is to provide prospective traders/speculators or otherwise with the information to make decisions on token purchases.

Turnkey Capital LLC has taken reasonable care to ensure that, as at the date of this white paper, the information contained is accurate to the best of its knowledge. However, the information may be subject to modification, supplementation, and amendment at any time and from time to time. Turnkey Capital LLC has no obligation to update or keep current any information or projections contained herein.

The buying of digital tokens is speculative and involves risks, which should be understood prior to making any decision to trade or purchase a token. Examples of risks include a decrease in token value, volatility in cryptocurrency markets, the possibility of increased regulation etc.

Prospective purchasers should conduct independent research and analysis to fully evaluate the merits and risks of their purchase, before making an independent decision to obtain or purchase digital tokens.
